

FOR IMMEDIATE RELEASE

UBCC Announces Two Major Enhancements to UBCC Accounting and Payroll Software Programs

Increased printing efficiency and signature security features further distinguish UBCC software

June 20, 2011 – Taos, New Mexico - Universal Business Computing Company (www.ubcc.com), the leading provider of high volume, high productivity software for accounting and payroll professionals, announced two major enhancements to UBCC accounting and payroll software programs, including their printing and signature technology.

Printing Enhancement

View multiple PDF and/or Excel reports launched from UBCC at the same time. Previously, any report printed could automatically have a PDF file created without requiring any extra time or keystrokes. This enhancement allows multiple reports to be open simultaneously, permitting the operator to compare and contrast the information in those reports. This enhancement eliminates the need for examining each report as a separate step. "The benefit of this enhancement is the increased efficiency and convenience of comparing, contrasting, or researching information contained in multiple documents," said Ken Garen, CPA, Co-founder and President of UBCC.

Signature Technology Enhancement

For decades UBCC has offered the most secure and efficient check signing technology in the industry. This enhancement allows the operator to use the same signature file to print in the correct location for all tax forms, greatly simplifying the operator's work. UBCC maximizes printer throughput by loading the graphics file into the printer memory once, then uses that memory image on each subsequent page printed. "The printer does not slow to re-load the image for each page, instead, it runs seamlessly at its fully rated speed" commented Garen.

UBCC converts its print ready signatures to a secure macro file that is not directly usable by any other software. "Other software vendors that use jpeg and bmp files for signatures create significant security risks for the payroll service bureau because any temporary worker, hacker, or office visitor could steal unsecure jpeg and bmp files and use them to create forged checks. Our industry-leading technique eliminates that risk," continued Garen.
